broncolor Scoro: Activation of “easy mode” now even easier

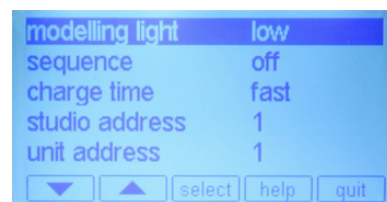

The Swiss lighting specialist is offering a software update for its top line model, the broncolor Scoro A. This improvement applies to all Scoro power packs starting from programme version 37.04.

The “easy mode” has been primarily developed for photographers who do not need all the possibilities offered by the Scoro power pack, but, nevertheless, would like to flash with a fast charge time and flash duration; as for example the

majority of fashion photographers. The LCD menu has been reduced to the five most important options and is therefore clearer and easier to use. (One can return from “easy mode” to “standard mode” with one simple manipulation).

In “easy mode”, the LCD display is reduced to the following five menu options:

- modelling light
- sequence
- charge time
- studio address
- unit address

1. Display in “easy mode”

Therefore, the menu options which are irrelevant for easy shootings, become inactive in the LCD menu:

- alteration of flash duration t 0.1
- selection of colour temperature adjustment
- selection of flash interval
- and many more

2. Display in “standard mode”

Former software versions of the Scoro power packs can be updated at your broncolor service station.
