PDN (Photo District News) elects broncolor Scoro A4S: POWER PACK OF THE YEAR

PDN, one of the most important journals of professional photography has chosen the Generator Scoro A4S to power pack of the year. Another success for the concept and realization of our top product!

Read for yourself the reasons of the Americans.

„Though we caught a lot of flak from Broncolor fanatics for daring to compare the Scoro A4 (favorably!) to the Profoto Pro-8s Air, the fact of the matter is that you can't really go wrong with either of these two power packs. In the categories of quality of light and overall speed, it was pretty much a dead heat. The Scoro A4S really shined through when it came to control. First off, with a maximum output of at 3200 w/s in all three heads, you're getting a more powerful and more versatile pack than the Profoto at about the same price. Secondly, the amount of tweaking you can do at that power whether it's with the asymmetrical control in all three channels; the independent color temperature adjustment; and the deep and user-friendly interface and helpful LCD screen, pushes the Scoro A4S to the front of the pack for studio generators.“
